

Automation Approach for Beazley GPAS & Billing program

Capgemini | beazley

Objectives

Scope of POC activities:

- Automate & run the designated functions of GW Policy Center UI - Complete
- Automate & run the Non designated functions of GW Policy Center - Complete
- Automate & run the designated functions of GW Billing Centre UI - Complete
- Automate & run the designated functions of GW Policy Center API - Complete
- Automate & run the Customized API Testing using GT API - Complete
- Automate & run the Cloud API Testing through Integration Gateway using GT API - Complete
- Test Data Parameterization – From External Source (Excel) - Complete
- Key Challenges & Learnings.
- Key features of GT Framework.

Note: **Guidewire PC and BC version :** JASPER

LoB: D&O

GW PC – Designated Functions – GT UI

Designated functions executed – GT UI:

- Account Overview

(Shows customer account details like name, address, status etc)

- Contact search

(Search the contact with First name and Last name)

- Forms Inference

(View the inferred form. However, since the forms are not configured for D&O, so viewed the Forms page only)

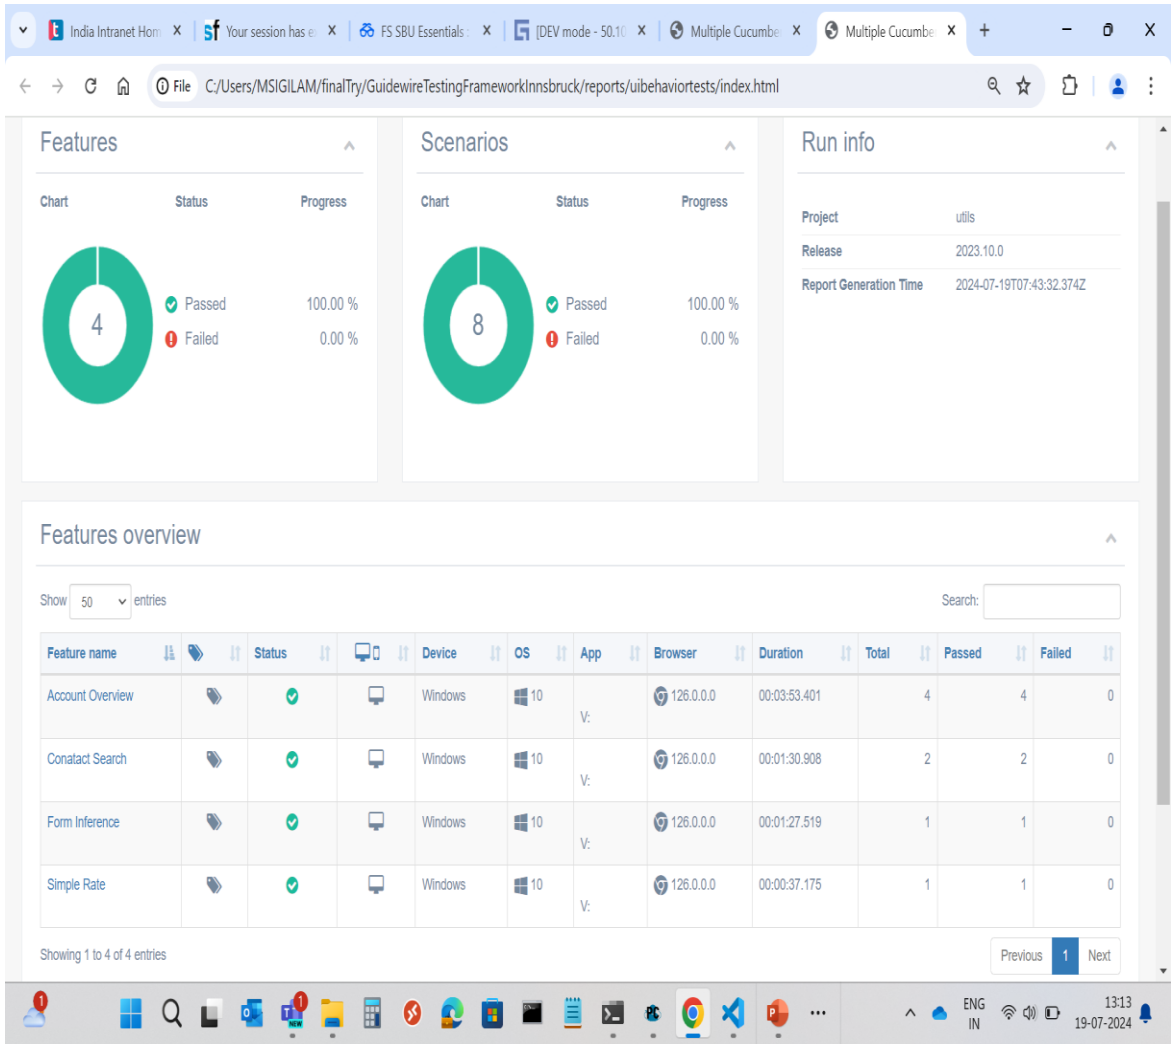

- Simple Rate

(View the premium once the submission is in quoted status. However, Rating engine is not configured , so premium is showing as blank)

Test-Data:

TestType	CompanyName	Primary-Email	Address1	City	AddressType	organization
Positive	SMK	smk@gmail.com	HB	Haines City	home	acv
Negative	MFC	1111	MLG	Lake City	home	acv

Execution Report:

GW PC – Non-Designated Functions – GT UI

Non-Designated functions executed – GT UI:

- Account creation

(New account creation by providing Name, Address, mail id, City, State and Zip code)

- Quote creation

(To generate premium based on the coverages added)

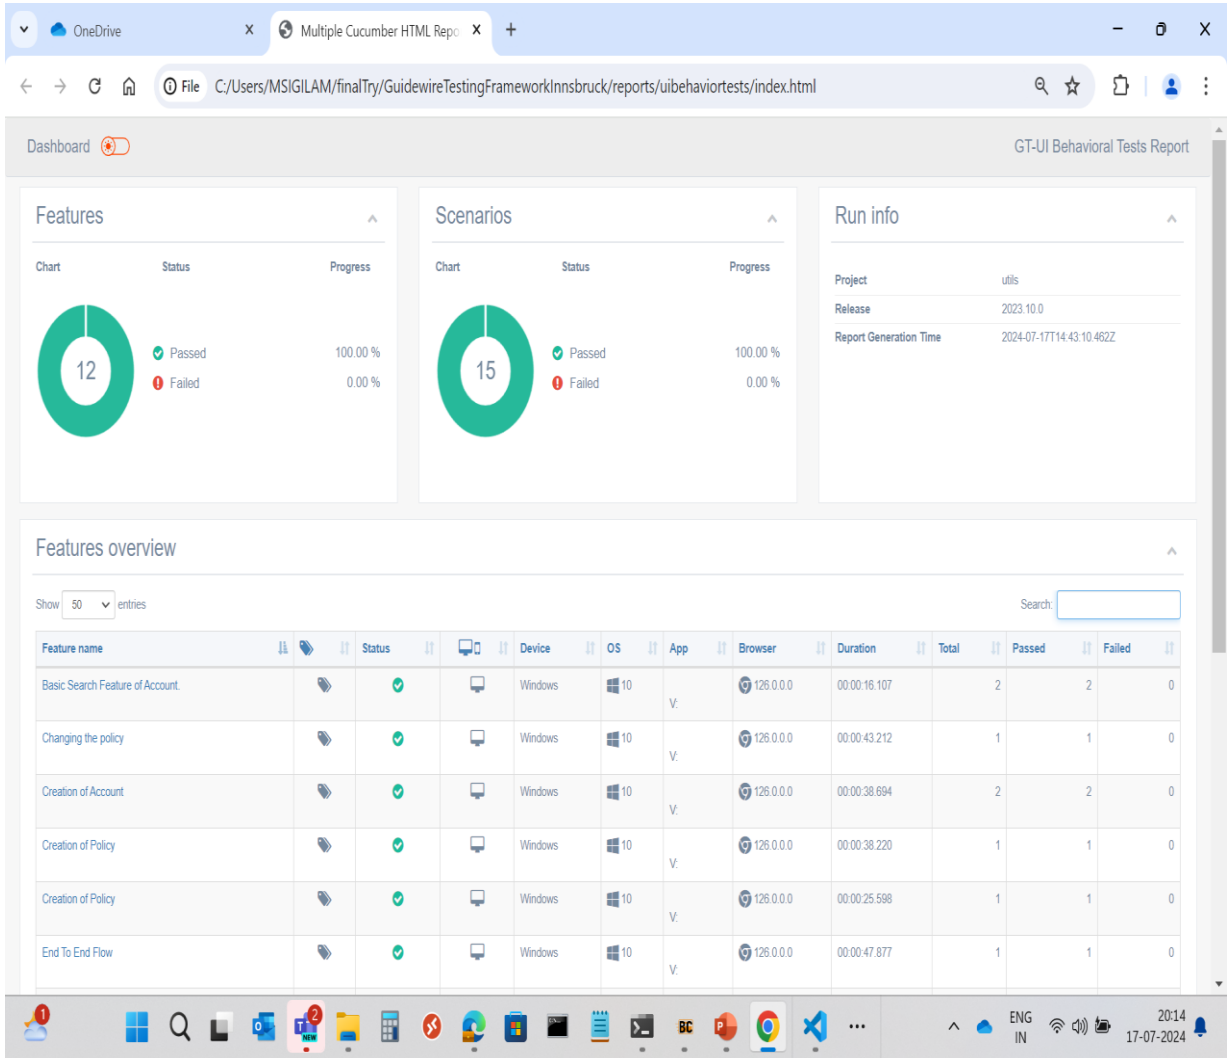

- Issue policy
- Policy change
- Cancellation
- Rewrite

(End to End lifecycle of policy like issue, Change, Cancel and Rewrite)

Test-Data:

TestType	CompanyName	Primary-Email	Address1	City	AddressType	organization
Positive	SMK	smk@gmail.com	HB	Haines City	home	acv
Negative	MFC	1111	MLG	Lake City	home	acv

Execution Report:

GW BC – Designated Functions – GT UI

Designated functions executed – GT UI:

- Invoice Billed

(Invoice Bill summary page view)

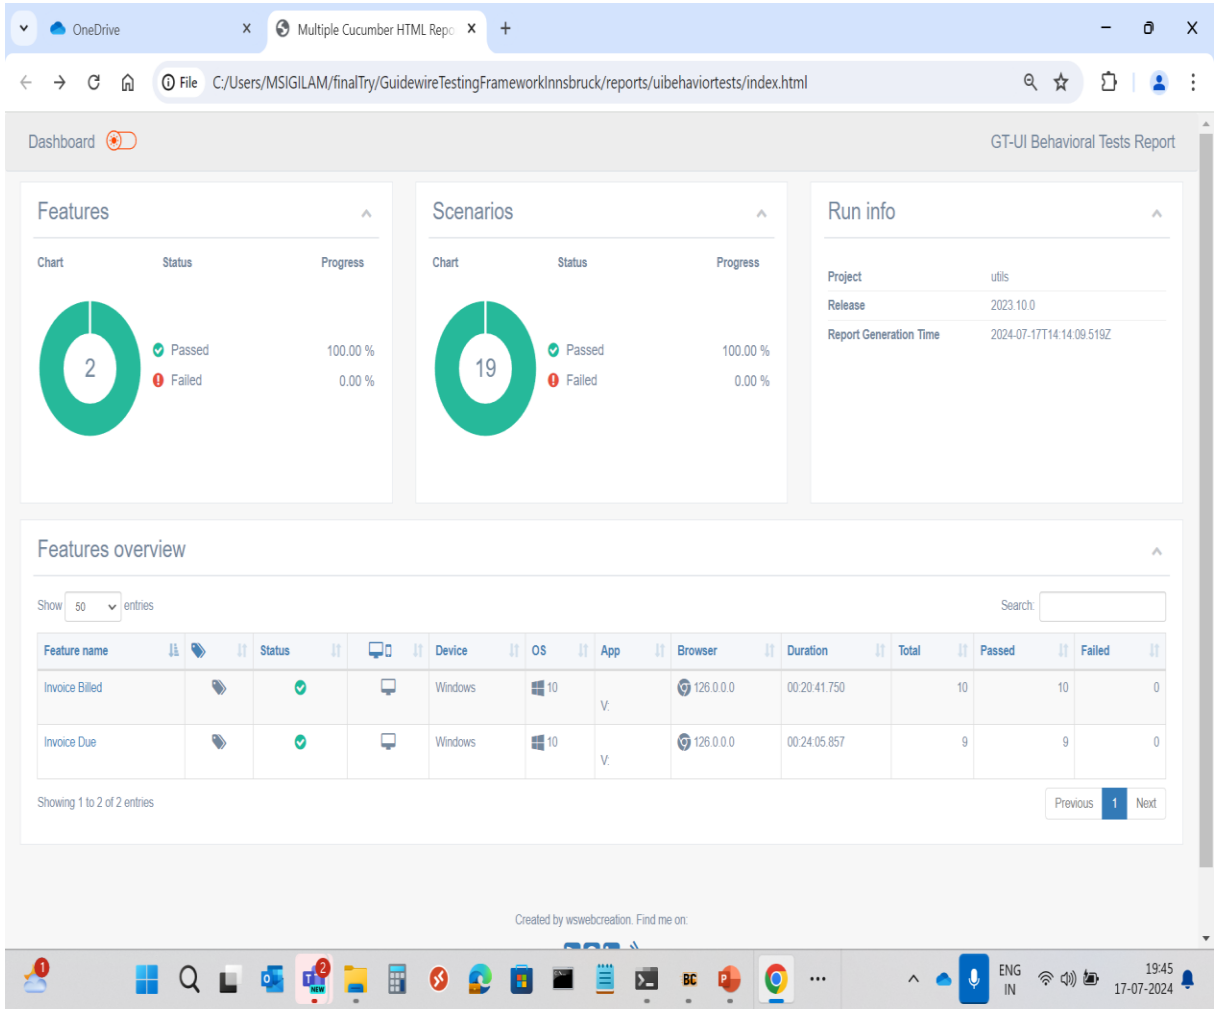

- Invoice Due

(Invoice Due amount view in summary page)

Test-Data:

BillingPlan	DelinquencyPlan	Contact-State	Contact-AddressLine1	Contact-City
QA1BILLINGPLAN01	QA1DELINQUENCYPLAN01	CA	1332 Everett Street	El Cerrito

Execution Report:

GW PC – Designated API – GT API

Designated functions executed – GT API:

- Searching for Account

(Search an existing account number with account holder name or account number)

- Adding Activity

(Add activity to account and policy)

- Adding Note

(Add note to account and policy)

- Submission quoting

(Create a new submission and Quote)

- Submission Binding

(Create a new submission and Bind)

- Searching for Policy

(Search for a policy with policy number)

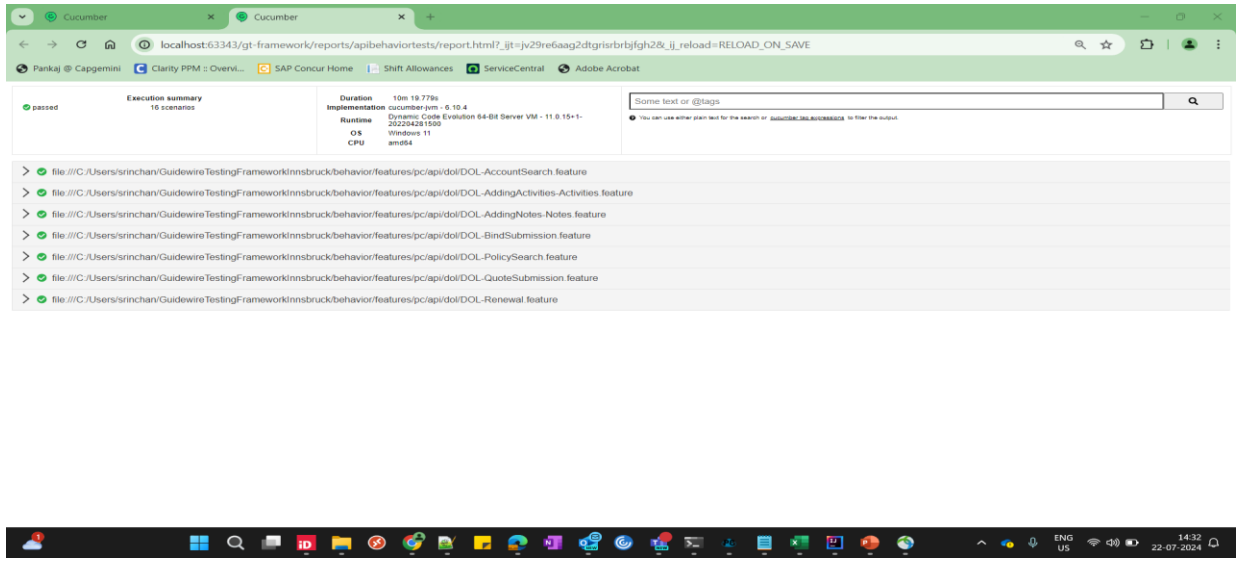

- Renewal

(Renewed a policy term)

Test-Data:

Searching for Account with account holder name		Searching for Account with account number	Adding an activity to an account/policy	Adding an note to an account/policy
First Name	**Last Name**	**Account Number**	**New Activity**	**New Note**
Ray	Newton	5487005930	New mail - Review new mail	Coverage requests
Adam	Kumar	2430943036	Request - Create new producer	Loss Control
Kumar	Jeevan	7011711080	Meet with new insured	Financial Issues
Kims	Jhon	8540931853	Policy notification	Pre-renewal direction

Execution Report:

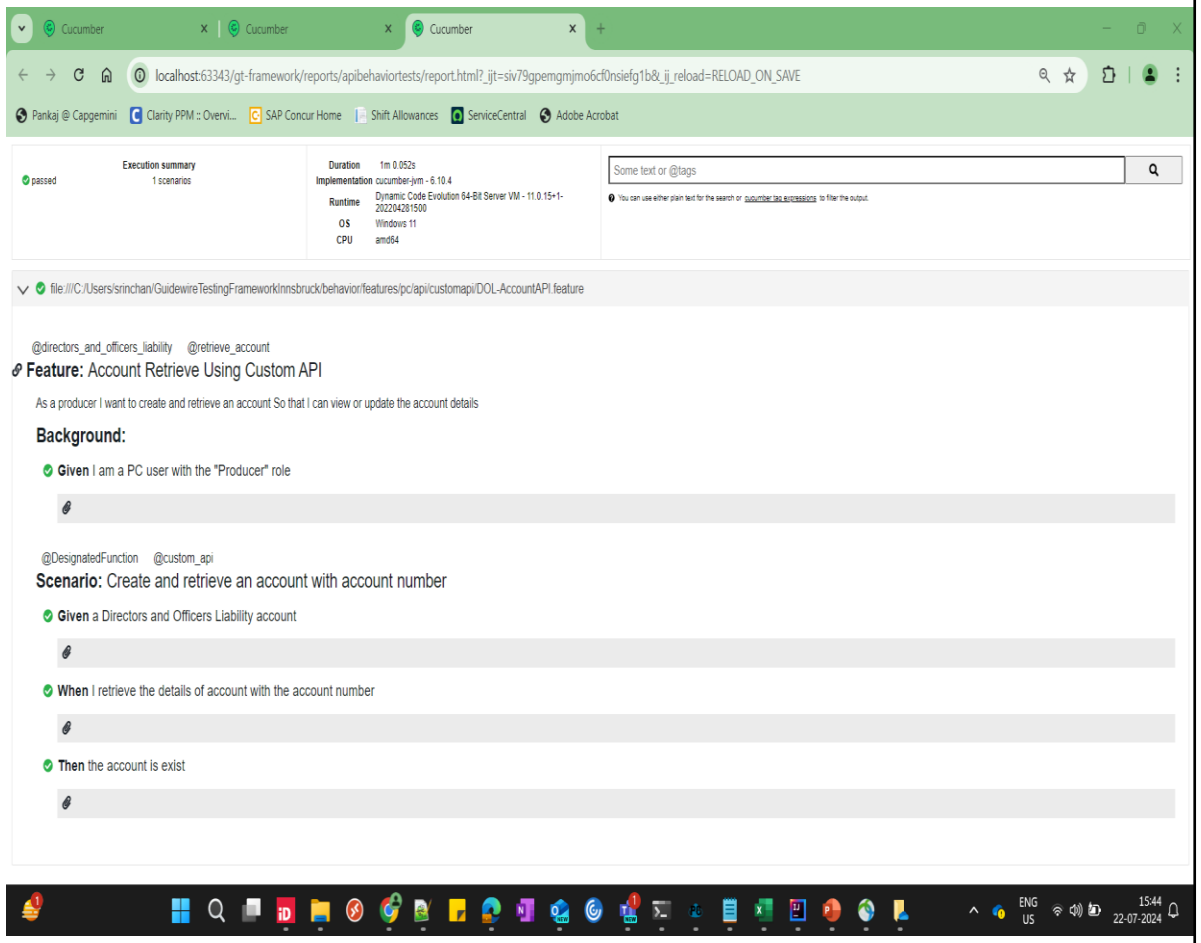

Customized API Testing with GT API - 1

Customized API functions executed – GT API:

- Create the account API & Retrieve the account API

(A custom cloud API has been developed in GWPC. GT API script was developed and executed to create an account, retrieve to view account summary)

Execution Report:

Customized API Testing with GT API - 2

Purpose of this is to call 2 customized APIs (Create account API & Retrieve account API) and get response.

Create account API Request and Response JSONs:

```
Request:
Scenario : Create Account
Method: POST
End Point URL:  http://localhost:8180/pc/rest/account/v1/accounts

Create Account Request Body

{
  "data": {
    "attributes": {
      "initialPrimaryLocation": {
        "nonSpecific": true,
        "postalCode": "94404",
        "state": {
          "code": "CA"
        }
      },
      "initialAccountHolder": {
        "contactSubtype": "Person",
        "firstName": "John68f0686f-4c9e-46dd-8a68-",
        "lastName": "Portmandb142bce-ae49-4711-88",
        "primaryAddress": {
          "addressLine1": "1234 Hillsdale Blvd",
          "city": "Foster City",
          "postalCode": "94404",
          "state": {
            "code": "CA"
          },
          "country": "US"
        }
      },
      "organizationType": {
        "code": "individual"
      },
      "producerCodes": [
        {
          "id": "pc:S-CRMfwts2AvuG09FEdM4"
        }
```

```
Response:
Scenario : Create Account
Response End Point URL: http://localhost:8180/pc/rest/account/v1/accounts/accounts/pc:5d5eMhz_MhR0146uGDmeF

Create Account Response Body

{
  "data": {
    "attributes": {
      "accountHolder": {
        "displayName": "John68f0686f-4c9e-46dd-8a68- Portmandb142bce-ae49-4711-88",
        "id": "pc:5e6Dnbm860E9FVzip9UiX",
        "type": "AccountContact",
        "uri": "/account/v1/accounts/pc:5d5eMhz_MhR0146uGDmeF/contacts/pc:5e6Dnbm860E9FVzip9UiX"
      },
      "accountNumber": "4212726219",
      "accountStatus": {
        "code": "Pending",
        "name": "Pending"
      },
      "createdDate": "2024-07-23T11:39:18.803Z",
      "frozen": false,
      "id": "pc:5d5eMhz_MhR0146uGDmeF",
      "numberOfContacts": "1",
      "organizationType": {
        "code": "individual",
        "name": "Individual"
      },
      "preferredCoverageCurrency": {
        "code": "usd",
        "name": "USD"
      },
      "preferredSettlementCurrency": {
        "code": "usd",
        "name": "USD"
      },
      "primaryLanguage": {
        "code": "en_US",
```

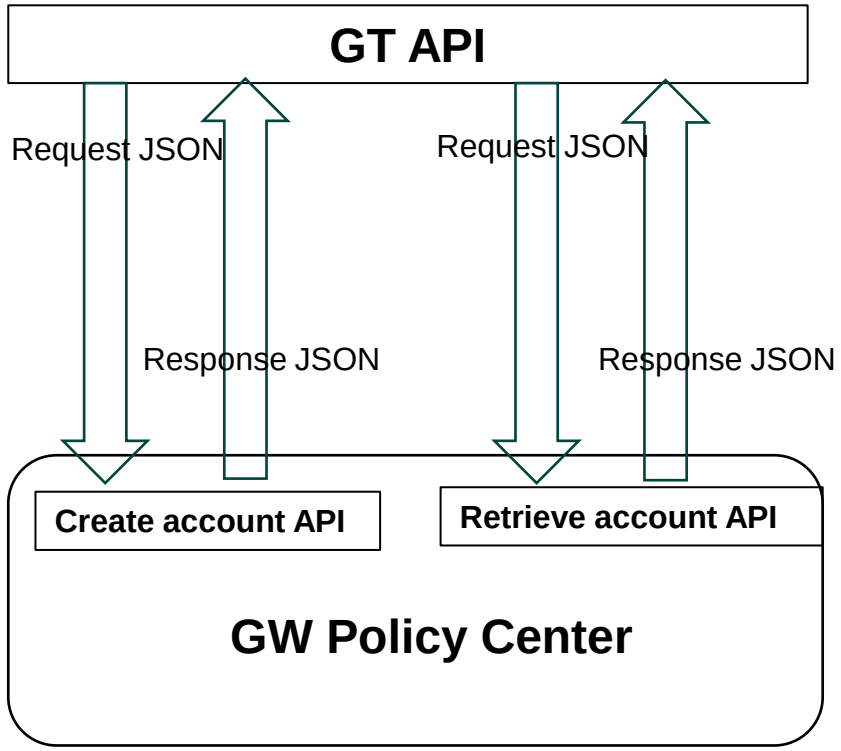

Retrieve account API Request and Response JSONs:

```
Request:
Scenario : Retrieve Account
Method: GET
End Point URL:  http://localhost:8180/pc/rest/beazley/account/4212726219

Retrieve Account Request GET End Point URL
http://localhost:8180/pc/rest/beazley/account/4212726219
```

```
Response:
Scenario : Retrieve Account
Retrieve Account Response Body
{
  "AccountNumber": "4212726219",
  "AccountStatus": "Pending",
  "FirstName": "John68f0686f-4c9e-46dd-8a68-",
  "LastName": "Portmandb142bce-ae49-4711-88",
  "Message": "Success",
  "Status": 200
}
```

Flow Diagram:

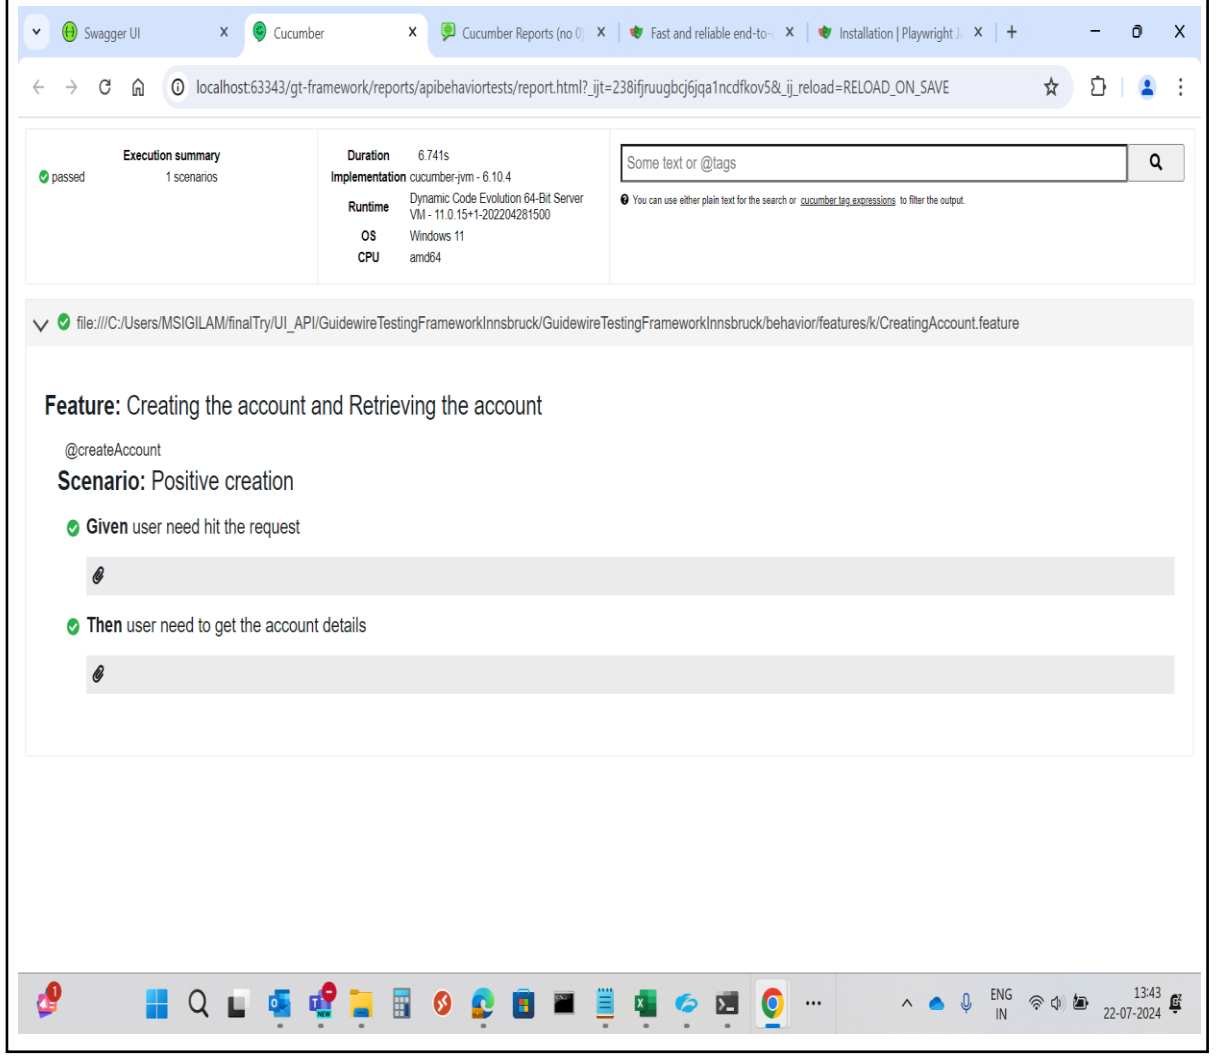

Cloud API Testing through Integration Gateway – GT API - 1

Cloud API testing through Integration Gateway functions with GT API:

- Create the account & Retrieve the account

(A custom cloud API has been developed in Integration Gateway. GT API script was developed and executed to create an account, retrieve to view account summary through Integrated Gateway)

Execution Report:

Cloud API Testing through Integration Gateway – GT API - 2

Purpose of this is to call 2 customized APIs (Create account API & Retrieve account API) through Integration Gateway and get response.

Create account API Request and Response JSONs:

```
Request:
Scenario : Create Account
Method: POST
End Point URL: http://localhost:8081/api/process
Create Account Request Body(
{
  "data": {
    "attributes": {
      "initialAccountHolder": {
        "accountingContact": true,
        "companyName": "Rock",
        "contactSubtype": "Company",
        "primaryAddress": {
          "addressLine1": "HB1",
          "city": "Texas",
          "country": "US",
          "postalCode": "123456",
          "state": {
            "code": "AZ",
            "name": "AZ"
          }
```

```
Response:
Response End Point URL: http://localhost:8081/api/process/v1/accounts/pc:STBa8xOUPHAdNQU-KBlia
Create Account Response Body
{
  "data": {
    "attributes": {
      "accountHolder": {
        "displayName": "Rock",
        "id": "pc:SQ-qixeuh95ScjHFiKhzr",
        "type": "AccountContact",
        "uri": "/account/v1/accounts/pc:STBa8xOUPHAdNQU-KBlia/contacts/pc:SQ-qixeuh95ScjHFiKhzr"
      },
      "accountNumber": "7318782697",
      "accountStatus": {
        "code": "Pending",
        "name": "Pending"
      },
      "createdDate": "2024-07-23T11:59:39.585Z",
      "frozen": false,
      "id": "pc:STBa8xOUPHAdNQU-KBlia",
```

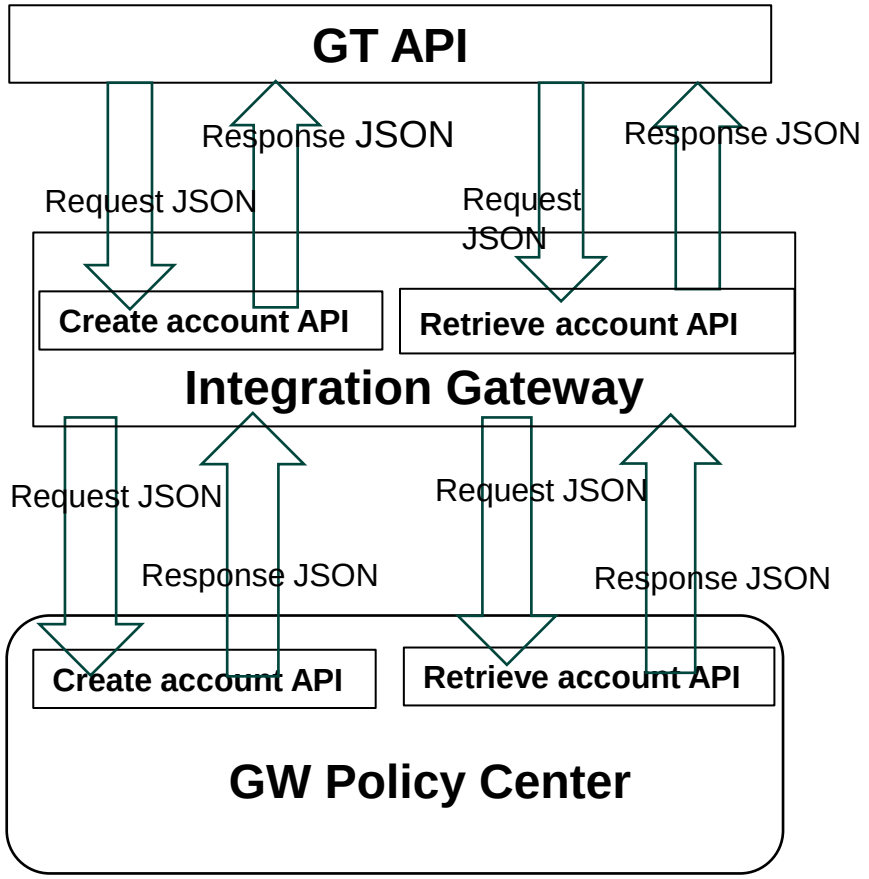

Retrieve account Request and Response JSONs:

```
Request:
Scenario : Retrieve Account
Method: GET
End Point URL: http://localhost:8081/api/getAccountDetails?accountId=pcK3ASTBa8xOUPHAdNQU-KBlia

Retrieve Account Request GET End Point URL
http://localhost:8081/api/getAccountDetails?accountId=pcK3ASTBa8xOUPHAdNQU-KBlia
```

```
Response:
Scenario : Retrieve Account
Retrieve Account Response Body
{
  "data": {
    "attributes": {
      "accountHolder": {
        "displayName": "Rock",
        "id": "pc:SQ-qixeuh95ScjHFiKhzr",
        "type": "AccountContact",
        "uri": "/account/v1/accounts/pc:STBa8xOUPHAdNQU-KBlia/contacts/pc:SQ-qixeuh95ScjHFiKhzr"
      },
      "accountNumber": "7318782697",
      "accountStatus": {
        "code": "Pending",
        "name": "Pending"
      },
      "createdDate": "2024-07-23T11:59:39.585Z",
      "frozen": false,
      "id": "pc:STBa8xOUPHAdNQU-KBlia",
```

Flow Diagram:

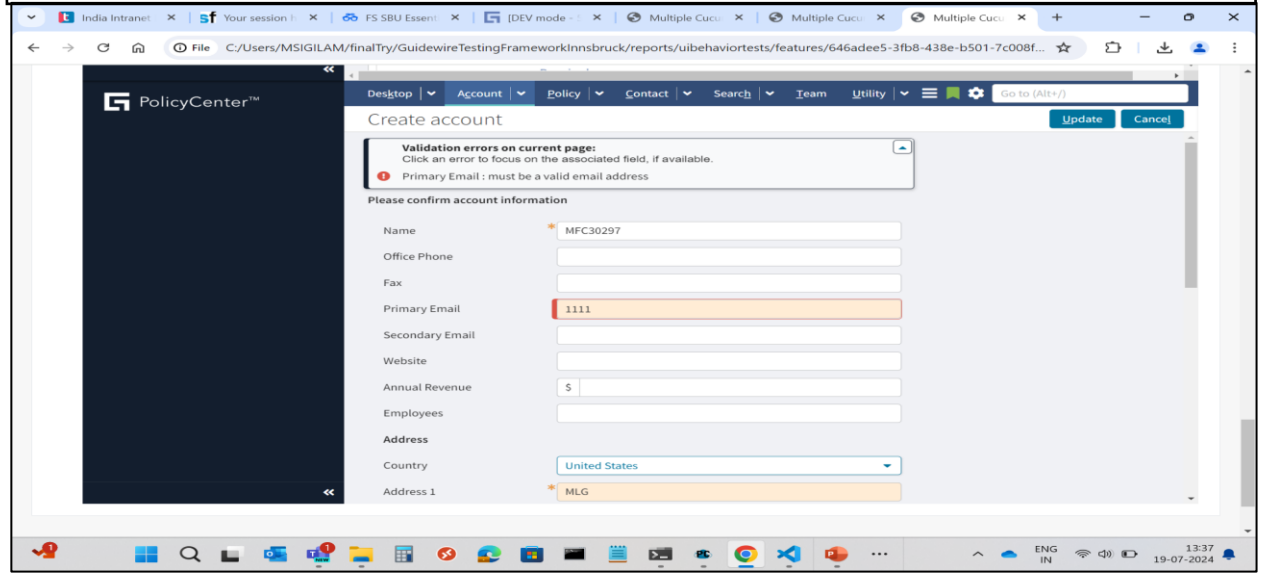

Test Data Parameterization – From External Source (Excel)

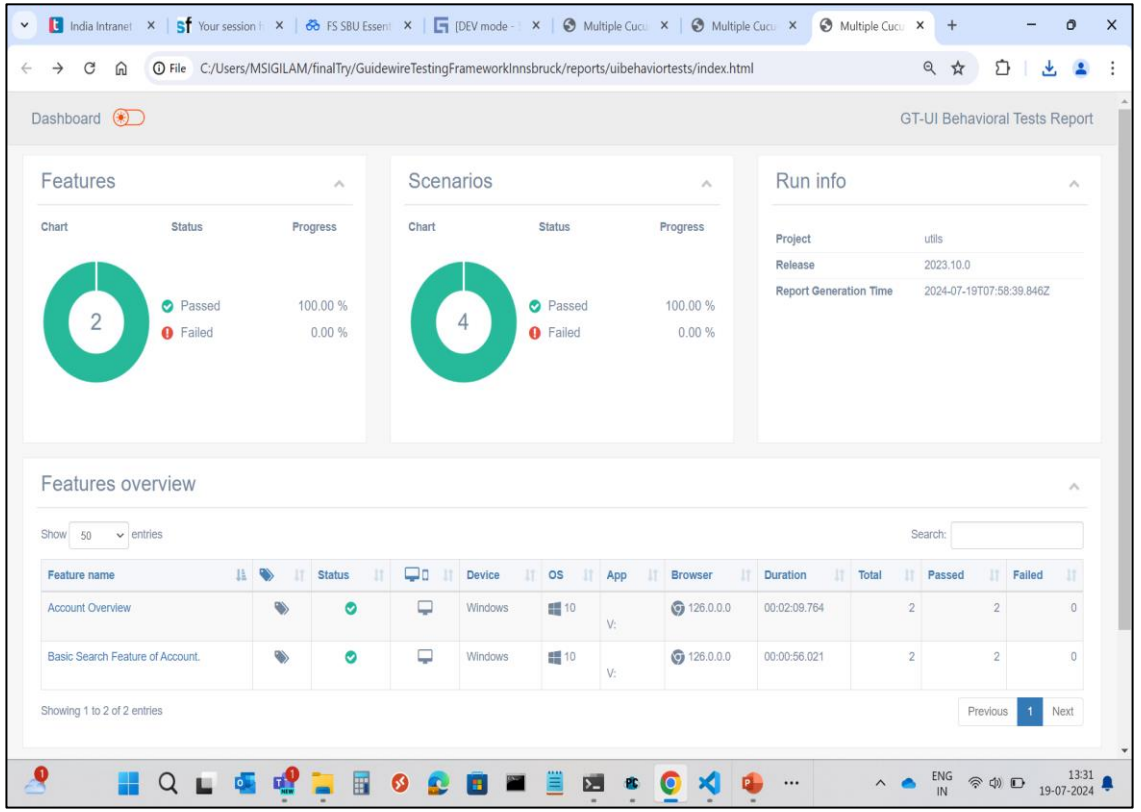

GT Framework can read from Excel sheet and populates the data into the application.

Test Scenarios :Account Creation and Overview.

Test Data:

Test-Type	CompanyName	Primary Email	Address1	City	AddressType	organization
Positive	SMK	smk@gmail.com	HB	Haines City	home	acv
Negative	MFC	1111	MLG	Lake City	home	acv

Key features of GT Framework

Advantages:

- GT Framework is part of GW OOTB package.
- Designated functions scripts are already written and available. Enables faster testing with pre-automated scenarios using BDD approach.
- Cloud API can be tested using GT API.
- Skillset is available within the team.
- Having Ignite tool within GT Framework, it avoids manual efforts drastically.

Limitations:

- Any delay in Batch job response require manual intervention.
- Any major limitations in the product release will end up waiting for a new product update (Eg: Browser crash issue observed till Cortina was resolved only in Elysian Version).
- Guidewire not being open source, technical challenges can only be resolved via Guidewire support or internal knowledge base

Conclusion:

Being proprietary within Guidewire and POC being successful on key features of the framework, Capgemini recommends we use GT framework for all automation purposes for Sprint testing
